WebMonit Review KBackup Pro is a data back-up solution that helps you to restore and recover all your files from an image, including documents and other types of files, in case of major system crashes or hard disk failures. KBackup Pro is very easy to use and simple in its basic operations, but it also boasts a few more advanced features that can prove useful to more experienced users. KBackup Pro offers you the option to choose between several backup levels: - Local - If you choose this option, you will have to choose the folders or individual files you want to back up (depending on the desired level of protection); - Remote - In this case, the backup copy will be written directly to the server from which you are connecting; - Multidrive - This is the most advanced mode that supports automatic backup generation for connected devices. This feature is a great way to protect your files in case you happen to lose them, especially if you are using a laptop or any other portable device. - Exclude - When you choose to exclude folders or files, these will remain unbacked-up; this is a useful option to choose if you are an online gamer and you don't want to back up your games. KBackup Pro is equipped with various actions, which are scheduled on a regular basis (daily, weekly, monthly). If you choose to schedule them in a daily basis, this means you will have to back up your files on a daily basis, which isn't a daunting task (unless you get thousands of files); on the other hand, choosing a weekly schedule requires a more advanced knowledge, since it allows you to choose the intervals of data backup. As far as the number of files or folders included in the backups, you can freely increase or decrease it, so you can choose how many files or folders you want to backup on a weekly basis. KBackup Pro is a free software, but if you need more advanced tools, you can get more flexibility and additional features if you download the Premium version for a fee. KBackup Pro offers you the choice to restore your data from a previous backup you have made.
